

Save today for their tomorrow.

Speaker 1: "I am the mother of the first American scientist to go to Antarctica, New Zealand. I am very proud that my daughter is impacting with other scientists from the North Pole and the South Pole making discoveries that will impact the environment today and for generations to come. The Florida Prepaid program was a dream come true as a parent because it provided me the financial pathway to allow my daughter to get an education. When I read about the Florida Prepaid Program, I was very interested. In grade school, I chose the four-year tuition and the four-year dormitory program. In consideration, I felt the dormitory program was just as important as the tuition program because I wanted to have a safe place for my daughter to live and to study on campus. There were times when the monthly payment was very challenging but I thought it was just as important making that as putting food on the table. Suzanne is living her dream and we hope that the Florida Prepaid Program can make your dreams come true.
